

ASSIGNABLE DIRECTOR AUTHORITY FOR CONTROL
OF STREAMING DIGITAL CONTENT

ABSTRACT

5

Assigning director authority in a system that streams digital content from a multiplicity of sources of digital information to a multiplicity of client devices under control of a multiplicity of directors, the method implemented in conjunction with a network of digital computers, at least one of the digital computers comprising a content server upon which

10 the steps of the method are implemented in computer memory and upon at least one computer processor, each director having director attributes, the content server including a store of director instruction records wherein each director instruction record represents one director instruction, including extracting for a director, in dependence upon the director's attributes, director instructions from the store of director instruction records and

15 downloading the extracted director instructions to the director.
